

# Green Power

Did you know that 40 percent of the electricity you use comes from a renewable resource? That's right! Water. The hydroelectric power that we purchase as a co-op is generated using the water that passes through the Edison Sault Electric and U.S. Army Corps of Engineer facilities located along the St. Mary's River.

But now, you can have *even more* of your electricity come from renewable energy resources like wind, wood and even landfill gas.

To increase the percentage of your power that comes from renewables, please complete and return the enrollment form below. The change will be reflected on your next monthly electric bill.

**Example: Monthly Usage of 500 Kilowatts**

Energy Charge (\$0.0723)	\$36.16
Facility Charge	\$9.00
PSCR Factor	\$1.05
or <b>Renewable Energy 60%</b>	<b>\$2.05</b>
or <b>Renewable Energy 80%</b>	<b>\$4.10</b>
or <b>Renewable Energy 100%</b>	<b>\$6.10</b>

(Based on current rates & charges, taxes not included.)

Please return your signed enrollment form with your Cloverland Electric bill, or mail to:  
Cloverland Electric Co-op, 2916 W. M-28, Dafer, MI 49724

**Yes!** I want to enroll in Cloverland Electric Cooperative's renewable energy program.

Increased Participation Levels - *Please check one box only*

- 60%** \$0.0041 *additional charge per kwh*
- 80%** \$0.0082 *additional charge per kwh*
- 100%** \$0.0122 *additional charge per kwh*

## Green Power

I understand that by signing this agreement, I have decided to have more of the electricity that I purchase from the co-op come from renewable resources at the level indicated above. The additional charges incurred for my level of participation will appear as a separate line item on my next monthly electric bill. This program is open only to residential and commercial customers billed on a monthly basis.
